

About Link 4

The link 4 is a wireless router which beams all data from any compatible device back to a live cloud based portal. This device can receive information from up to 99 hoistnet enabled devices across a 100m range.

Beaming data back to the portal also enables the alert function, where instant email alerts are sent to designated contacts, when a crane is operated outside of normal practice (overload / side load etc). Data from any overhead crane with a hoist net enabled system, is beamed back within 30 seconds of the operation, meaning data is live and incidents can be swiftly investigated.

How It Works

- Plug & Play Installation – Preconfigured and ready to use.
- Receives Data Wirelessly – Link-4 connects to up to 99 HoistNet-enabled devices within a 100m range, collecting real-time operational data from overhead cranes and lifting equipment.
- Transmits Data to the Cloud – The collected information is sent to a secure, cloud-based portal, ensuring instant access for operators, managers, and safety personnel.
- Triggers Instant Alerts – If unsafe crane operations occur, Link-4 automatically sends email alerts to designated contacts for immediate action.
- Provides Real-Time Insights – Operational data is updated within 30 seconds of any crane activity, allowing swift analysis, incident investigations, and data-driven decision-making.

Key Features

REAL TIME CLOUD BASED MONITORING

Live updates of crane operations automatically uploaded to web friendly portal within 30 seconds every activity.

INSTANT ALERT NOTIFICATION

Instant automated email notifications for unsafe crane operations

DELIVERED PRECONFIGURED

No site commissioning required, just plug and use.

WIRELESS CONNECTIVITY

Collects data from up to 99 Hoist Net devices within 100m already installed on any crane regardless of age and manufacturer

Benefits

FULL CRANE OPERATIONS VISIBILITY

Provides real-time visibility into crane operations for better decision-making

REDUCES OPERATION DOWNTIME

Reduces downtime by enabling proactive maintenance and rapid incident response..

LIVE AND COMPREHENSIVE DATA REPORT

Transmit and simplifies real time data collected from your crane operations
